### Forms & Attributes - How to Make a Form Live on the Site Page

#### Question:

I have created a form, but it appears in the additional data box. How can I make it show directly on the site page?

#### Answer:

If you have already created the Form with all of its Extended Attributes you can then select the Admin tab from the toolbar (1). Once on the Admin page select forms (2).

# accruent

Once the new page opens find the Form you want to select to show on the site page, and click the blue and white menu to the left (3), then click the option Edit Form Properties (4),

Forms Builder				Forms Builder			
C	) Add			Add			
	Name 🔺	Is Active		Name 📥	Is Active		
	45634684678r5		Task	45634684678r5		Task	
	Agitonal Site Info	<b>v</b>	Documents	Additional Site Info	×	Documents	
	Admin Form	×	Property	A Edit Form Droportion	×	Property	
	Attribute Test - Task	×	Task		×	Task	
	Bananas or TYPEa?	×	Task	G Form Designer	×	Task	
	Ben's look up test	×	Property	Mark Form Inactive	1	Property	
	Case #198790	×	Unit	Delete Form	×	Unit	
	Construction Needs	×	Task	Construction Needs		Task	
	Cool Whip	×	Leases	Cool Whip		Leases	
	Core Form	1	Incident			1	

A new section will appear under the Form name. Make sure the 'Object Type' represents the location you would it to appear. For this example we are selecting Site. Now select the 'Is Default' tickbox (5). This will enable this form to show on the previously selected 'Object Type' page.

Admin Form	4	Property
* Name: Admin Form		
Is Default:		
Object Type: Property -		
Submit Cancel		

Now travel to a site and you can verify the Form and it's Extended Attributes are now visible directly on the page itself, rather than in the Additional Data box.
